No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence encodes an Arabidopsis thaliana histone deacetylase designated AtRPD3A. The protein is homologous to yeast RPD3 and HDA1. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating gene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nucleotide sequences which have regulatory elements in operative encoding histone deacetylase. The method is useful for regulating the developmental, physiological or biochemical pathway within a plant, particularly for repressing ethylene-responsive phenotypes (e.g. Inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with perturbing a gene. The histone deacetylase genes are useful for altering the development of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Methods for regulating gene expression in transgenic plants, e.g. repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation), comprises introducing genes encoding histone deacetylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1807

                                                                                                                                                                                              The present sequence is that of cDNA clone sr1.pk0023.dl encoding soybean histone deacetylase | (HDI, see AAYSB829), a chromatin associated protein. The cDNA clone was isolated from a soybean root cDNA library on the basis of homology to other plant histone deacetylases. The invention relates to isolated rice, soybean and wheat nucleic acid fragments encoding HDI. It also relates to the construction of a chimeric gene encoding all or a portion of HDI, in sense or antisense orientation, where expression of the chimeric gene results in production of altered levels of HDI in a transformed host cell. The availability of nucleic acid sequences encoding (portions) of histone deacetylase proteins will facilitate studies of global transcriptional regulation in enkaryotic cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chromatin associated protein; histone deacetylase gene 1; HDI; soybean; transgenic plant; transcription regulation; ss.

                                                      altering the levels of heterochromatin, altering chromatin assembly, and gene activity of the transformed plants. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Maize histone deacetylase; family 1, ZmHD1; promoter regulator; promoter; RNA polymerase II; transcription; plant transformation; heterochromatin; disease registance; chromatin assembly; gene activity; toxin screening;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
CC (see AAV58828) of rice histone deacetylase 1 (HD1), a chromatin CC associated protein. The contig was obtained from cDNA clones isolated from rice callus, 15-day-old leaf and 15-day-old seedling CC isolated from rice callus, 15-day-old leaf and 15-day-old seedling CC cDNA libraries on the basis of homology to other plant histone CC deacetylases. The invention relates to isolated rice, soybean and CC wheat nucleic acid fragments encoding HD1. It also relates to the CC construction of a chimeric gene encoding all or a portion of HD1, CC in sense or antisense orientation, where expression of the chimeric CC gene results in production of altered levels of HD1 in a CC transformed host cell. The availability of nucleic acid sequences cenceding (portions) of histone deacetylase proteins will facilitate CC studies of global transcriptional regulation in eukaryotic cells,
                                                                                                                                                                                                                              Claim 3; Page 24; 36pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      吕
                                 RNA polymerase II, for transcription of genes. The nucleotide sequence can be used to transform plants and increase disease resistance by altering the levels of heterochromatin, altering chromatin assembly, and gene activity of the transformed plants. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining

                                                                                                                                                             The present sequence encodes a maize histone deacetylase. This DNA belongs to family 1, ZmHDl and appears to be regulator of promoters for RNA polymerase II, for transcription of genes. The nucleotide sequence can be used to transform plants and increase disease resistance by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1362 tggggataaaagatgggatccggattcagacatggatgttgatgatgac

                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes an Arabidopsis thaliana histone deacetylase designated AtRPD3B. The protein is homologous to yeast RPD3 and HDA1. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating gene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nucleotide sequences which have regulatory elements in operative
                                                                                                                                                                                                                                                                                                        association with a gene of interest or with a nucleotide sequence encoding histone deacetylase. The method is useful for regulating the developmental, physiological or biochemical pathway within a plant,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with perturbing a gene. The histone deacetylase genes are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 9;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Methods for regulating gene expression in transgenic plants, e.g. repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotypogation), comprises introducing genes encoding histone deacetylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CA2316036-A1

                                                                                                                                                                                                                                                                   The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99212, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI9914 represent PCR primers for a mouse ischaemic condition related sequence,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABI99512;

                                                                                                                                                                               respectively. METH1 and METH2 have been found to be potent inhibitors of cancer and other disorders related to angiogenesis both in vitro and in vivo. They can be used for treating ceancer and other disorders related to angiogenesis including abnormal wound healing, inflammation, rheumatoid arthritis, psorlasis, endometrial bleeding disorders, diabetic retinopathy, some forms of macula degeneration, haemangiomas, and arterial-venous malformations. They may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, somatic, such as cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or conditions, both chronic and acute conditions. The products can also be used for detection and diagnosis, AAZ32080, and AAY49503 to

          The present invention relates to human METH1 and METH2, (ME for metalloprotease and TH for thrombospondin; see AAB50002 and AAB50003). The present sequence is an expressed sequence tag (EST) for METH. METH can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease, rheumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonunion fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, Osler-Webber syndrome, plaque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cancer therapy; benign tumour; ocular angiogenic disease; rheumatoid arthritis; psoriasis; wound healing; endometriosis; vasculogenesis; granulation; hypertrophic scar; nonunion fracture; scleroderma, trachoma; vascular adhesion; myocardial angiogenesis; scleroderma, trachoma; vascular adhesion; myocardial angiogenesis; coronary collateral; cerebral collateral; arteriovenous malformation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antisense oligonucleotide that inhibits expression of a histone deacetylase, useful for treating and/or alleviating the symptoms neoplasia, or for inhibiting neoplastic cell growth in an animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1338 cgaggttgatgaagaccaagaagatg 1363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1218
                                                                                                                                                   Sequence
                                                                                                                                                                                                         The present invention provides inhibitors of histone deacetylase enzymes such as HDAC-1, HDAC-2, HDAC-3, HDAC-4, HDAC-5, HDAC-6 and HDAC-D. These inhibitors may be antisense strands or they may be compounds identified by contacting the enzyme with the compound and measuring the resulting enzyme activity. These inhibitors are useful for treating cancers and for identifying which histone deacetylase is involved in a neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               P-PSDB; AAB49955

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                        The present cDNA sequence encodes a novel histone deacetylase (HDx) polypeptide, designated HD1. The HDx polypeptides are capable of modulating proliferation survival and differentiation of cells. The proteins are able to alter chromatin structure by deacetylating histones such as H3 or H4. They have the ability to modulate cell growth by influencing cell cycle progression or to modulate gene transcription. The products can be used for diagnossis and therapy. They can be used, for example, to treat tumours or proliferative disorders or spermatogenesis, osteogenesis, chondrogenesis or the differentiation of progenitor cells. They can also be used to treat psoriasis, bone diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1380
                        fibroproliferative disorders, degenerative disorders, or for repair of cartilage, increasing bone density, liver repair subsequent to a partial hepatectomy, to promote regeneration of lung tissue in the treatment of emphysema, or for inducing tolerance in autoimmune diseases, and transplant recipients. Hox inhibitors can be used as anti-fungal agents, preservatives in foodstuff, feed supplements for promoting weight gain illuestock, disinfectants, insecticides or defoliants. The products can be considered to the products of the products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated histone deacetylase polypeptide(s) and genes -develop products for modulating the proliferation, survival differentiation of cells, e.g. for treating tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Histone deacetylase gene; HDx; HDl; HDx polypeptide; deacetylation; H3 H4; cell differentiation; chromatin structure; cell cycle progression; prolliferative disorder; fibroprolliferative disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAT86371 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             degenerative disorder; autoimmune disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cDNA encoding a histone deacetylase (HDx) protein, designated

                                                                                                                                                                                                                                                                                                                      The present invention provides inhibitors of histone deacetylase enzymes such as HDAC-1, HDAC-2, HDAC-3, HDAC-4, HDAC-5, HDAC-C and HDAC-D. These inhibitors may be antisense strands or they may be proposed the compound and measuring the resulting by contacting the enzyme with the compound and measuring the resulting enzyme activity. These inhibitors are useful for treating cancers and identifying which histone deacetylase is involved in a neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antisense oligonucleotide that inhibits expression of a histone deacetylase, useful for treating and/or alleviating the symptoms neoplasia, or for inhibiting neoplastic cell growth in an animal

:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GenEmbl:*
